

Gregory M. Laurent

Technical Leadership • Platform Engineering • Product Strategy

☎ 775.300.9291

📍 Reno, NV

✉ greg@abmac.io

Technical Leader with 20 years of experience building R&D ecosystems that bridge the gap between emerging technology and commercial viability. Proven track record includes **\$1.5M in award-winning SBIR proposals, Phase III commercialization, and zero-downtime modernization** of critical platform systems across SaaS, B2B, and B2G products. Now applying that expertise as an independent R&D consultant solving complex feasibility and infrastructure challenges for technical products.

Experience

Founder & Principal Consultant

Abstract Machines LLC

Nov 2023 — Current

Reno, NV

Founded consulting practice focused on technical leadership and mentorship for engineering and product teams.

Guide clients through technical challenges, feasibility analysis, process optimization, and product delivery.

- Guided client through developing new discovery methodology for early-phase technical research, enabling them to land larger, more complex projects and generate **\$550K in additional first-year revenue**.
- Embedded with client organizations across domains to conduct R&D feasibility studies and proof-of-concept development for emerging technologies, including subterranean leak detection systems and marketing attribution models with **IP/patent strategy support**.
- Defined product strategy and roadmaps for clients bringing technical products to market, translating business objectives into development plans and go-to-market approaches.
- Provided technical and managerial leadership to engineering and product teams across client engagements, driving process improvements and training product managers on governance and planning.

Product Manager

PROS

May 2022 — Dec 2023

Houston, TX (Remote)

Technical product manager for PROS B2B Data Management platform, leading modernization of company-wide data infrastructure.

- Led a team to turn around a multi-year, stalled project, delivering first production deployment for company-wide data platform.
- Owned platform roadmap and drove cross-product integration strategy, working with 5 engineering managers to prioritize resources and align 60+ engineers across platform initiatives.
- Piloted targeted cost reduction projects to save 94%, \$600K/year; Track volume-based costs to improve product packaging, maintain margin as the platform expands.
- Improved customer data quality reports, resulting in a 40% reduction in related support.
- Collaborated with VP of Product to redesign product management processes, establishing company-wide standards for planning, estimation, and governance.

Sr. Software Engineer

Loomis - US

Sep 2018 — May 2022

Houston, TX (Remote)

Senior member of the small, product-focused SafePoint team dedicated to supporting all business critical applications.

- Modernized critical financial platform (tracks \$1B transactions/day) with zero downtime by researching, designing, and implementing a solution to re-architect core transaction systems.
- Designed and implemented bit-perfect, fully-recoverable synchronization between incompatible databases, removing modernization blockers.
- Worked with stakeholders to assess risk and draft roll-out plans with recovery; assisted with designing and building a new event-driven platform with transparent legacy system integration.
- Coordinated with internal and external stakeholders on a customer onboarding pipeline. Customer Support increased productivity by over 60% with no staff increases.

Technical Lead

Progeny Systems

May 2010 — Sep 2018

Las Vegas, NV

DoD researcher focused on drafting Small Business Innovation (SBIR) proposals, rapid prototyping, and feasibility analysis.

- Key developer and researcher on Phase I and II solicitations using OCR to digitize and trace schematics for safety procedures and maintenance on high-pressure systems. Research outcomes directly enabled Phase III commercialization and DoD adoption.
- Led and mentored three development teams (12 engineers total) across multiple SBIR projects, training engineers on secure systems integration and DoD software requirements.
- Individually generated \$1M in revenue (2016-2018) across 3 Phase I and II SBIR awards.
 - Phase I and II awarded SBIR solicitations to modernize global Naval Fuel Depot Asset Management business processes. Successful productization of a first-of-its-kind mobile application to integrate with IBM Maximo.
 - Phase I awarded SBIR solicitation to support modern Naval galley kitchens with a mobile application for forms, guides, and on-site digital training.
 - Primarily authored and provided technical product guidance on a Phase I awarded SBIR solicitation for the Naval health and wellness information ashore and afloat.
