

SCALE SYSTEM DEMO

spec defaults — set-style(measure: 100)

font: **EB Garamond** (cap-em 0.65)

paper: **us-letter** — content width **480.7pt**

base: **11pt** | ratio: **1.25**

SIZES — SECTION A

Each size is $ms(n) = \text{base} \times \text{ratio}^n$. Step n in parens.

size-caption (−2) — **7.04pt**

size-small (−1) — **8.8pt**

size-body (0) — **11pt**

size-h4 / size-lead (1) — **13.75pt**

size-h3 (2) — **17.19pt**

size-h2 (3) — **21.48pt**

size-h1 (4) — **26.86pt**

size-display (5) — **33.57pt**

LEADING — SECTION B

Spec: $\text{leading_role} = 1\text{em} + (\text{ratio} - 1) \times k \times \text{em}$ ($k \in \{1, 2, 3\}$) in baseline-to-baseline. Typst gap = $b2b - \text{cap-em} \times 1\text{em}$.

LEADING-BODY, $k=2$ — **0.85em** (TYPST GAP)

Body, lead, h3–h6. Lorem ipsum dolor sit amet, consectetur adipiscing elit. Sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. Ut enim ad minim veniam, quis nostrud exercitation ullamco laboris nisi ut aliquip ex ea commodo consequat.

LEADING-TIGHT, $k=1$ — **0.6em** (TYPST GAP)

Display headings tighten. Lorem ipsum dolor sit amet, consectetur adipiscing elit. Sed do eiusmod tempor incididunt.

LEADING-LOOSE, $k=3$ — **1.1em** (TYPST GAP)

Small text loosens for legibility. Lorem ipsum dolor sit amet, consectetur adipiscing elit. Sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. Ut enim ad minim veniam, quis nostrud exercitation ullamco laboris.

TRACKING — SECTION E

Spec: tracking = (ratio - 1) × differentiator × em. Negative for display (tighten), positive for small (loosen). Differentiators ∈ {1/8, 1/4, 1/3, 1/2, 2/3}.

Display -1/3

h1 large -1/4

h4 small -1/8

Body — zero tracking

Small +1/8

Caption +1/4

SMALLCAPS +1/2

ALLCAPS +2/3

BLOCK SPACING — SECTION C

All derived as leading-body-b2b × ratio^k, then converted to Typst gap. Exponent encodes hierarchy: k=-1 minor, k=0 standard, k=1 heading, k=2 section.

paragraph (k=0): 0.85em

list-item (k=-1): 0.55em

heading-above (k=1): 1.23em

heading-below (k=-1): 0.55em

section-above (k=2): 1.69em

section-below (k=1): 1.23em

H3 DEMONSTRATION

Paragraph after h3. The gap above this h3 was heading-above; the gap below was heading-below. Note heading-below is tighter than heading-above — spec convention: headings attach to following content.

Second paragraph, separated by space-paragraph (= leading-body). Lorem ipsum dolor sit amet.

ANOTHER H3

Body after another h3. The first paragraph after a heading is never indented even if first-line-indent is set.

PAGE GEOMETRY — SECTION G

Spec: content area is similar to page (same aspect ratio). Both margin pairs split by ratio (asymmetric book canon — outer/inner = bottom/top = ratio).

measure-target: 100 chars

content-width: 480.7pt

margin-inner: 58.36pt

margin-outer: 72.94pt

margin-top: 75.52pt

margin-bottom: 94.4pt

INDENTS — SECTION D

All indents are `ms(n)` values:

indent-first-line: **17.19pt** (`ms(2)`)

indent-list: **13.75pt** (`ms(1)`)

indent-quote: **17.19pt** (`ms(2)`)
