

Gregory M. Laurent

Technical Strategy • Applied R&D • Platform & Product Leadership

☎ 775.300.9291

📍 Reno, NV

✉ greg@abmac.io

Twenty-year career with progressively broader responsibility across engineering, applied R&D, platform modernization, product strategy, and commercialization. Track record includes **successful SBIR proposals totaling \$1.5M in awards, Phase III commercialization, and zero-downtime platform modernization** across SaaS, B2B, and B2G products. Through Abstract Machines, brings this experience to technical strategy, technical feasibility, and commercialization across organizations.

Experience

Founder & Principal

Nov 2023 — Current

Abstract Machines

Reno, NV (Remote)

Founded Abstract Machines to lead technical strategy, technical feasibility assessment, applied R&D, and productization for client organizations, connecting engineering leadership with commercialization.

Technical Discovery: Led development and implementation of a technical discovery methodology that enabled a client to secure larger, more complex engagements, contributing \$550K in additional revenue.

Technical Feasibility: Evaluated technical viability and developed proofs of concept to reduce risk and inform commercialization decisions for emerging technologies, including subterranean leak detection systems and marketing attribution models, with IP/patent strategy support.

Product Strategy: Defined product roadmaps for clients bringing technical products to market, translating business objectives and technical feasibility into development priorities, sequencing, and go-to-market strategy.

Engineering & Product Leadership: Led technical and product decision-making across client engagements, aligning engineering and product teams on delivery priorities and strengthening governance and planning through product manager training.

Product Manager

May 2022 — Dec 2023

PROS

Houston, TX (Remote)

Owned product and platform strategy for PROS B2B Data Management, including roadmap, cross-product integration, and company-wide data infrastructure modernization.

Platform Strategy & Resource Alignment: Owned platform roadmap and drove cross-product integration strategy, partnering with platform architects and four engineering managers to prioritize work and align 30+ personnel across platform initiatives.

Platform Delivery: Turned around a multi-year stalled data-platform initiative, leading the team to its first production deployment for the company-wide data platform.

Platform Economics: Piloted a targeted platform cost reduction of 94%, saving approximately \$600K annually; tracked volume-based costs to improve product packaging and protect margins as platform usage scaled.

Data Quality: Improved customer data-quality reporting, reducing the person-hours required for the same support workload by 40%.

Process Governance: Partnered with the VP of Product to redesign product management processes, establishing company-wide standards for planning, estimation, and governance.

Sr. Software Engineer

Sep 2018 — May 2022

Loomis - US

Houston, TX (Remote)

Owned and built the critical integration layer processing \$1B daily, orchestrating transaction flow across the SafePoint retail cash-deposit and provisional-credit platform.

Platform Modernization: Re-architected the critical integration layer, achieving zero-downtime migration, zero-second cutover, and self-healing recovery.

Systems Integration: Designed and implemented bit-perfect, fully recoverable synchronization between incompatible databases, eliminating a critical blocker to platform modernization.

Operational Improvement: Redesigned onboarding workflows with operational stakeholders, increasing Customer Support productivity by more than 60% without additional headcount.

Risk Management: Partnered with stakeholders to assess risk and define rollout and recovery plans; contributed to the architecture and implementation of a new event-driven platform with transparent legacy system integration.

Technical Lead

May 2010 — Sep 2018

Progeny Systems

Las Vegas, NV

Technical lead for DoD SBIR research programs, leading three development teams across applied research, prototype development, and productization, with research outcomes enabling Phase III commercialization and DoD adoption.

SBIR Capture & Commercialization: Individually generated \$1M in revenue during 2016–2018 across three Phase I and II SBIR awards. Productized a first-of-its-kind mobile application integrating with IBM Maximo to modernize Naval Fuel Depot asset management.

SBIR Proposal Development: Primarily authored the winning Phase I proposal and provided technical product guidance for Naval health and wellness information ashore and afloat; additional awarded work addressed mobile forms, guides, and on-site training for Naval galley kitchens.

Applied Research & Commercialization: Developed OCR capabilities and conducted research under Phase I and II SBIR programs to digitize and trace schematics for high-pressure system safety procedures and maintenance. Research outcomes directly enabled Phase III commercialization and DoD adoption.

R&D Engineering Leadership: Led and mentored three engineering teams totaling 12 developers across concurrent DoD R&D programs, including training on secure systems integration and DoD software requirements.
