

# Heading 1 — display

---

## Heading 2

### Heading 3

#### Heading 4

---

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magnam aliquam quaerat voluptatem. Ut enim aequi doleamus animo, cum corpore dolemus, fieri tamen permagna accessio potest, si.

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magnam aliquam quaerat voluptatem. Ut enim aequi doleamus animo, cum corpore dolemus, fieri tamen permagna accessio potest, si.

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magnam aliquam quaerat voluptatem. Ut enim aequi doleamus animo, cum corpore dolemus, fieri tamen permagna accessio potest, si.

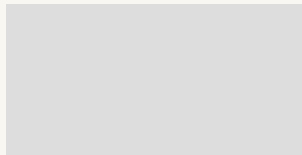

This paragraph contains *italic emphasis*, **bold strong**, and `inline code`, plus a [link to Typst](#). The decorations inherit the surrounding text size.

*The truth is rarely pure and never simple. — Oscar Wilde*

```
fn fibonacci(n: u32) -> u32 { if n < 2 { n } else { fibonacci(n - 1) +  
fibonacci(n - 2) } }
```

Figure 1. A standalone caption used outside of a figure block.

- First unordered item
  - Second item with *emphasis* inside
  - Third item
1. First ordered item
  2. Second
  3. Third
- c) Override numbering scheme and starting value
- d) Letters in parentheses, starting from “c)”

A figure with a caption rendered via the layout component.

**Per-call: bold + dark gray.**

Red link with custom underline stroke.

```
fn dark-theme() {}
```

```
fn outlined-code() {}
```

Quote with deeper indent and no italic override.

*Quote with yellow background, uniform padding, rounded corners.*

■ *Quote with a blue left rule — the modern callout style.*

**Bold; fill and tracking stay at the layout defaults.**

This paragraph has `justify: true` applied per-call so the text fills the full measure with stretched inter-word spacing, except the last line. The same parameter can be set globally via `layout.make(justify: true)` or per-component via overrides: `(text-1: (justify: true))`. Useful for body text in book-like documents where ragged-right would feel out of place.

Rhythm params: unit = **4pt**, baseline = **16pt**, atomic-divisor = 4.

Spacing scale: n1 = **2pt**, base = **4pt**, p1 = **8pt**, p2 = **12pt**, p3 = **16pt**, p4 = **24pt**, p5 = **32pt**, p6 = **48pt**.

Snap 17.4pt to unit: **16pt**. Snap 17.4pt to baseline: **16pt**.

*Quote with rhythm-derived left inset (16pt).*

## Native markup heading 1

## Native markup heading 2

This is a plain paragraph written in pure Typst markup. It picks up text-1's defaults (size, tracking, word-space, leading, fill) from the markup show rule. **Bold inline** and *italic inline* work via our strong/emphasis components. Inline code routes through the code component. And a markup link to <https://typst.app> gets the theme accent color plus underline.

## Heading 3

- Native list item one
- Native list item two with *emphasis*
- Native list item three

1. Numbered item one
2. Numbered item two

```
fn native_markup() -> Result<(), Box<dyn Error>> {  
  println!("Native code block via show rule");  
  Ok(())  
}
```

*Typography exists to honor content.*

— *Bringhurst*

## Footnotes

This paragraph has a footnote<sup>1</sup> right here. And a second one<sup>2</sup> to demonstrate gap spacing.

---

<sup>1</sup>The footnote text is set in text-3 (one step below body) and uses the muted foreground color, with a 30% rule above the entries.

<sup>2</sup>Footnotes appear at the bottom of the page they reference, with a thin rule above.
